

What you have working so far

- \* What still isn't working

So far, I can make Aurdino press the correct password but there is still one steps missing which is I have to press "enter" by myself. I still tried to combine the computer unlocked code and drawer unlocked code into one sketch

- \* What you plan to do in the next week

I believe I will fix code issues at next class. In next week, I will use foam board to make a physic prototype.

- \* Any changes you've made to your idea

I already make Aurdino successfully connect with NFC shield and I can let Aurdino unlock my computer successfully.
